

Opalescence™ Whitening Products: The Trusted Choice in Teeth Whitening

Opalescence whitening products are used in more than 125 countries and remain a trusted choice among dental professionals seeking reliable, science-based cosmetic whitening solutions. Within the take-home category, **Opalescence PF™** and **Opalescence Go™** provide two distinct yet complementary options that allow clinicians to address a wide range of patient indications and preferences.

Opalescence PF offers a fully customized approach using dentist-fabricated trays and carbamide-peroxide gel in two concentrations: 10% carbamide peroxide (10% CP ~ 3% HP) and 16% carbamide peroxide (16% CP ~ 5,8% HP). The formulation includes potassium nitrate and fluoride to support enamel health and minimize sensitivity, while the viscous, sticky gel helps ensure precise placement and reduced soft-tissue exposure. Its flexible wear times, including the possibility to even use it overnight, make it suitable for cases ranging from mild discoloration to more complex whitening needs.

Opalescence Go provides a convenient, prefilled alternative for patients who benefit from a simple whitening option without the need for impressions. The UltraFit™ tray adapts to individual dentitions, delivering consistent gel contact. With its ready-to-use trays and short daily wear time from 60 to 90 minutes a day, it serves as an ideal entry-level or maintenance whitening solution.

Opalescence products have earned the confidence of clinicians worldwide, and the following insights highlight what dentists have to say about integrating these systems into their everyday practice:

“Whenever patients with discolored teeth require a flexible, comfortable, and uncomplicated cosmetic teeth whitening treatment, the solution in our dental practice is Opalescence Go whitening gel. The reasons are simple and self-explanatory: the whitening gel with 6% hydrogen peroxide is ready to use right out of the package. It is a trustworthy material due to its easy handling, short wear times, and amazing results.”

- Sara Jalili (Oslo, Norway) on Opalescence Go

“Tooth whitening treatments with Opalescence are an essential part of our practice offer. They do not only contribute to lasting satisfaction and long-term patient loyalty but also make an interesting economic contribution to the overall practice result.

As a dental hygienist, I am always pleased whenever I can make my patients happy in such an uncomplicated, gentle, and risk-free way. I can highly recommend users to test Opalescence tooth whitening with their own teeth and get convinced.”

- Luisa Roch (Germany) on Opalescence

“Even after more than 10 years, Opalescence PF is still the method of choice for teeth whitening in our practice and at home. The gentle and effective formulation with potassium nitrate and fluoride (PF) hardly ever leads to sensitivities. Furthermore, the treatment can be continued flexibly and easily at home - while watching television, doing housework or simply overnight.”

- Dr. Clarissa Jänig (Germany) on Opalescence PF
